IC Card Reader	Dual-chip (ISO 7816 compliant)
NFC	NFC Support
Contactless Certifications	Visa payWave, MasterCard PayPass

Description:

Every industry has unique needs—what works for a restaurant won't necessarily work for a bank. The SUNMI CPad PAY breaks the mold of one-size-fits-all commercial devices, adapting seamlessly to diverse sectors with features tailored for restaurants, retail stores, self-banking kiosks, and self-ordering stations. It's not just a payment pad; it's a versatile tool that transforms operations across industries.

Restaurants & Hospitality:

In dining settings, the CPad PAY streamlines every step from seating to payment. Staff can take orders tableside on the 11" display, which shows high-resolution menu images and allergen information—reducing errors from misheard orders. The pad sends orders directly to the kitchen, cutting down on paper waste and wait times. When it's time to pay, customers can split the bill, choose from multiple payment methods (NFC, QR code, or card), and receive digital receipts—all without leaving their seats . The Mobile Version, with its shoulder strap, is perfect for outdoor patios or food trucks, while the Countertop Ready Version with a printing base handles takeout orders at the counter.

Retail & E-Commerce:

For retail, the CPad PAY turns checkout into a seamless experience. Equipped with an optional external barcode scanner, it reads product codes instantly, displaying prices and inventory levels in real time . It integrates with loyalty programs,

automatically applying discounts based on customer history, and supports multiple payment types—critical for catering to diverse shopper preferences. The 11" display can showcase product promotions during checkout, boosting upsell opportunities. For pop-up shops, the Mobile Version ensures you're never without a checkout solution, while the Countertop Ready Version with a multi-function base connects to cash drawers and receipt printers .

Self-Banking & Financial Services:

Security and reliability are paramount in banking, and the CPad PAY delivers. Its bi-directional magnetic stripe reader and dual-chip IC card reader comply with ISO standards, ensuring secure card transactions . The PCI PTS 6.X and EMV certifications protect sensitive data, while the optional fingerprint module adds user authentication for high-value transactions. Self-service kiosks equipped with the CPad PAY let customers check balances, transfer funds, or pay bills—all with the same security as a teller transaction . The TMS (Terminal Management System) allows banks to remotely monitor devices, ensuring compliance and software updates .

Self-Ordering Kiosks:

In fast-food chains, convenience stores, or cinemas, self-ordering reduces wait times and labor costs—and the CPad PAY is the ideal core. Its 11" touchscreen (with industrial-grade TDDI chip) offers responsive, user-friendly navigation, guiding customers through menus with clear visuals . Multilingual support caters to diverse audiences, while integrated payment processing lets users pay instantly via their preferred method. The Secondary Display Version can be paired with T3 PRO devices, showing order summaries on one screen while processing payments on the other—enhancing transparency .

What ties these scenarios together is the CPad PAY's adaptability. Its customizable SUNMI OS 4.0 lets businesses tailor the interface to their needs—restaurants can add menu categories, retailers can highlight sales, and banks can simplify transaction steps . With 10+ accessories, from protective cases to wall mounts, it fits into any physical space, whether it's a cramped kitchen or a spacious retail floor.

No matter the industry, the CPad PAY delivers consistent benefits: faster service, reduced errors, enhanced security, and happier customers. It's more than a device—it's a solution that grows with your business, adapting to new challenges and opportunities across sectors. From the bustle of a restaurant to the precision of a bank, the SUNMI CPad PAY is the versatile partner every business needs.
