The camera with a 67.9° ultra-big visual angle can recognize customers with a height of 1.5~1.9m

Two stereo speakers
Brings customers pleasantand clear prompt soundswith two stereo speakers(one on each side).

Description:

In the restaurant industry, speed, accuracy, and customer satisfaction are everything. But traditional ordering—relying on busy servers to take orders, enter them into a POS, and relay them to the kitchen—often leads to delays, mistakes, and missed upsell opportunities. The SUNMI K2 Restaurant Floor-Standing Kiosk changes that. Designed for fast-food chains (like POpeyes) and casual dining spots (like yOSHinOVA), this self-ordering kiosk doesn't just speed up service—it helps customers spend up to 30% more per order, all while boosting satisfaction.

The secret to its success starts with the immersive visual interface. The 23.8" FHD capacitive touchscreen brings your menu to life with high-quality images, videos, and personalized recommendations. Want to upsell a combo meal? The kiosk can highlight add-ons (fries, a drink, dessert) with enticing visuals, making customers more likely to upgrade. Unlike a server who might forget to mention specials, the kiosk consistently promotes your highest-margin items—turning every order into an opportunity to increase revenue. The 10-point multi-touch screen ensures smooth interactions; customers can scroll through the menu, customize their order (e.g., "no onions," "extra sauce"), and confirm in seconds—no lag, no frustration.

Under the hood, the K2 is built to handle the demands of peak dining hours. Config 1's Kyro-670 Qualcomm octa-core processor (up to 2.7GHz) and 6GB RAM keep the menu app running smoothly, even when multiple customers are using the kiosk at once. The 128GB ROM stores all your menu data, images, and transaction logs—so you can update the menu remotely (add new items, adjust prices) without touching the kiosk. For smaller restaurants, Config 2 (4GB RAM + 32GB ROM) or Config 3 (4GB RAM + 16GB ROM) offer reliable performance at a lower cost.
Loyalty programs are a key driver of repeat business, and the K2 makes it easy for customers to participate. The contactless loyalty card reader lets users tap their card to access their account, earn points, or redeem rewards—no need to fumble with a phone app or remember a membership number. It's a small touch that makes customers feel valued, encouraging them to come back again and again.

Payments are fast and flexible, thanks to built-in NFC support for SoftPOS. Customers can tap their phone, contactless card, or wearable to pay—no waiting for a server to bring a card terminal. Transactions are encrypted for security, and the process takes under 2 seconds—so customers can get their order number and find a seat quickly. If you need to accept physical card payments, pair the kiosk with a SUNMI P series terminal; customizable holders keep the terminal integrated and accessible.

When the order is confirmed, the Japanese Seiko print engine swings into action. Available in 58mm or 80mm widths, the printer churns out order tickets at 250mm/s—so the kitchen gets the order fast, and customers get a clear receipt with their order details. The printer's eye-catching orange cover makes it easy for customers to spot their ticket (no more searching through a pile of receipts), and the auto-cutter ensures clean, easy-to-read tickets every time.

Connectivity is critical for restaurant operations, and the K2 delivers. Config 1 supports 2.4GHz/5GHz/6GHz dual-band Wi-Fi (IEEE 802.11 a/b/g/n/ac/ax), ensuring a stable connection even in busy restaurants with multiple devices (tablets, kitchen displays, other kiosks). Config 2/3 offer 2.4GHz/5GHz Wi-Fi, which is more than enough for most foodservice environments. A 100/1000M self-adaptive LAN port is also included for wired connections—great if you want to prioritize speed for sending orders to the kitchen.

The K2's design is both functional and stylish. Its thin white body fits seamlessly with modern restaurant decor, and the floor-standing design (540×490×1850mm, 45Kg) is sturdy enough to handle daily use. The kiosk operates in temperatures from 0°C to 40°C, so it can stand near hot food stations or in air-conditioned dining areas without issues. Two 3W stereo speakers provide clear audio prompts ("Order confirmed—please take your ticket") and can even play background music to enhance the dining atmosphere.

But don't just take our word for it—over 300 foodservice brands in 30+ countries trust the SUNMI K2 to streamline their operations. POpeyes uses it to reduce wait times during lunch rushes, while yOSHinOVA leverages the immersive menu to showcase its Japanese-inspired dishes. The result? Happier customers, more efficient staff, and higher revenue.

If you're ready to take your restaurant's ordering experience to the next level, the SUNMI K2 Restaurant Floor-Standing Kiosk is the solution. It's not just a self-ordering tool—it's a revenue booster, a time saver, and a way to keep your customers coming back for more.
